

■■ CYBERSECURITY NEWBIE JOURNEY LOG

Student Profile: Abdoulaye Sidibe | Portfolio: abdyys.substack.com

■ COMPLETED LAB TRAINING MODULES

Lab Phase	Core Concepts & Commands Deployed
Phase 1: Deployment & System Setup	Bypassed vendor cloud loops via OOBE\BYPASSNRO. Injected local administrative account credentials via CLI.
Phase 2: Network Reconnaissance	Deployed VirtualBox environments. Utilized Nmap scanning strings (nmap -v -A) to map open host architectures.
Phase 3: Defensive Firewalls	Provisioned package dependencies via apt. Programmed explicit inbound drops and targeted TCP rule allowances on Port 80 via UFW.
Phase 4: Dictionary Exploitation	Unpacked master wordlist datasets via gzip. Deployed automated multi-threaded login assessment strings via Hydra .
